

## Type SC

- # Air-cored inductors
- # Custom wound
- # Gold, silver or copper wire
- # Maximum Q
- # Leaded or smd

Type SC air-cored inductors are manufactured to custom specifications with a unique part number and drawing to identify the final design. These precision wound components may be wound with an internal diameter from 0.3mm producing nH inductance values. The air-core produces very stable high Q inductance from a miniature component particularly suitable for high frequency applications.

## Ordering information

Type SC air coils may be ordered using the following TFC part number or referenced to a specific customer drawing as required.

TFC Part No ----- SC 0.6 A 2.5 C R

- SC ----- Type SC air coil
- 0.6 ----- Wire diameter(mm)
- A ----- Coil inside diameter(mm)
- 2.5 ----- No. of turns
- C ----- Lead length
- R ----- Winding type

## Standard winding types
